6xHis-Sumo 2 (Q90P)

Cat. # E3250

| Also Known as: | HSMT3; SMT3B; SUMO3; Smt3A; SMT3H2; MGC117191 |
|--------------------|---|
| NCBI Reference: | NM_006937 |
| MW (no tag): | 10.9 kDa |
| Species: | Human |
| Source: | Bacterial recombinant |
| Tag: | 6xHis |
| Stock Buffer: | 20 mM Tris, 150 mM NaCl, 2 mM βME, 10% Glycerol |
| Concentration: | See tube label |
| Quality Assurance: | ~95% by SDS-PAGE |
| | |

Description:

SUMO (small Ub-related modifier) is a Ub-like protein. Three types of SUMO are most commonly studied, SUMO 1, SUMO 2, and SUMO 3. SUMO 2 and SUMO 3 are almost identical isoforms and thus share many functions. Like Ub, SUMO can be conjugated to its target proteins as a polymeric chain. However, SUMO 1 forms chains inefficiently as compared to SUMO 2 and SUMO 3. SUMO is conjugated to target proteins by the E1 (SAE1/SAE2), E2 (Ube2I or Ubc9), E3 (RanBP2/Nup358, amongst others). Protein sumoylation is involved in many cellular processes including gene transcription.

| | The SUMO2(Q90P) mutant can still form polySUMO2 chains, but these chains are often resistant to desumolyation. |
