

## Ubiquitin Linkage Screening Kit III (Cat. # J3220)

\*The supplied UBE1 is sufficient for setting up 50 x 20 µl reactions. Each Ub mutant is sufficient for setting up 10 X 20 µl reactions.

### Description

Ubiquitin Linkage Screening Kit III is designed for two purposes: 1) to identify the ubiquitin lysine residue that is used to link the polyubiquitin chain conjugated on a protein substrate; 2) to determine whether a protein substrate is polyubiquitinated or conjugated with multiple monoubiquitin.

A typical 20 µl reaction contains 100 nM UBE1, 2 µM E2 (not supplied), 50 µM Ub or Ub mutants, 4 mM ATP, 2 µM E3 (not supplied) and 2 µM substrate (no supplied) in the ubiquitination buffer.
